

Disability Language*

DisabilityContentConsulting.Com

Disability language refers to the words and phrases we use to address Disabled people.

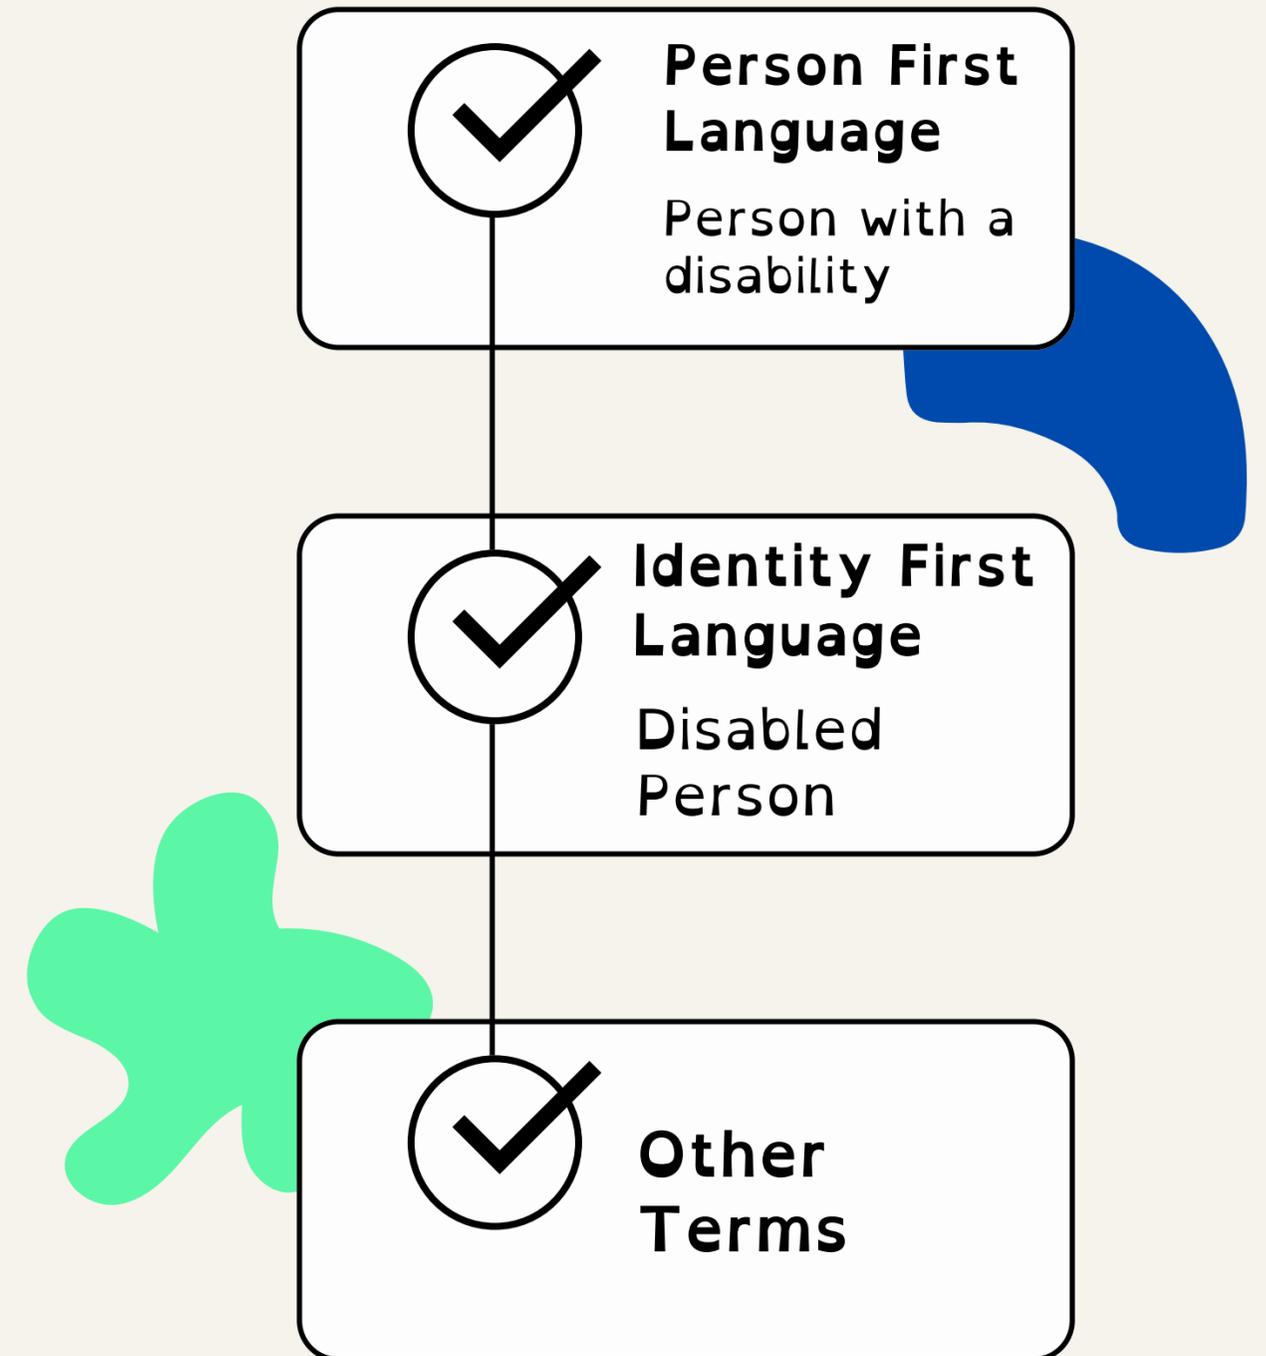

It's crucial to choose respectful, accurate language that reflects the individual's preferences.

*This presentation is written using Open Dyslexic font, an accessible font for those with Dyslexia and other disabilities.

Diversity in Disability Terminology

People with disabilities come from various backgrounds and cultures, each with unique perspectives on language and terminology.

The Importance of Contextual Inclusivity

What's considered polite and acceptable in one region or social setting might be offensive or not preferred in another.

Adapting Language

Ensure individuals feel regarded, valued, recognized, and appreciated

Settings and Contexts:

Autistic Community

May prefer
Identity First language

Parents of children with Autism

May prefer
Person First language

Legal Setting

“Handicapped”
U.S. Trade Laws

Non-Legal Setting

Disabled Person or
Person with a Disability

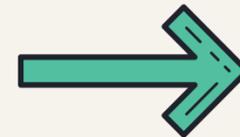

Learning Disabilities

Dyslexia
Dysgraphia
Dyscalculia

Learning Disabilities

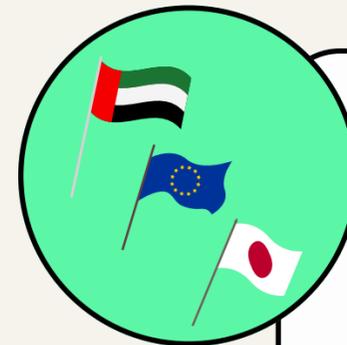

Down Syndrome
Fragile X Syndrome
Williams Syndrome

Identity First

and

Person First Language

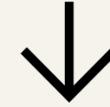

EU: Preference for Person First

Japan: Differently-Abled

UAE: People of Determination

ChatGPT Limitations

Subtleties of cultural nuances and specific contexts surrounding disability language.

Cannot understand the specific contexts of personal preferences.

Does not have a grasp of collective memory or historical significance.

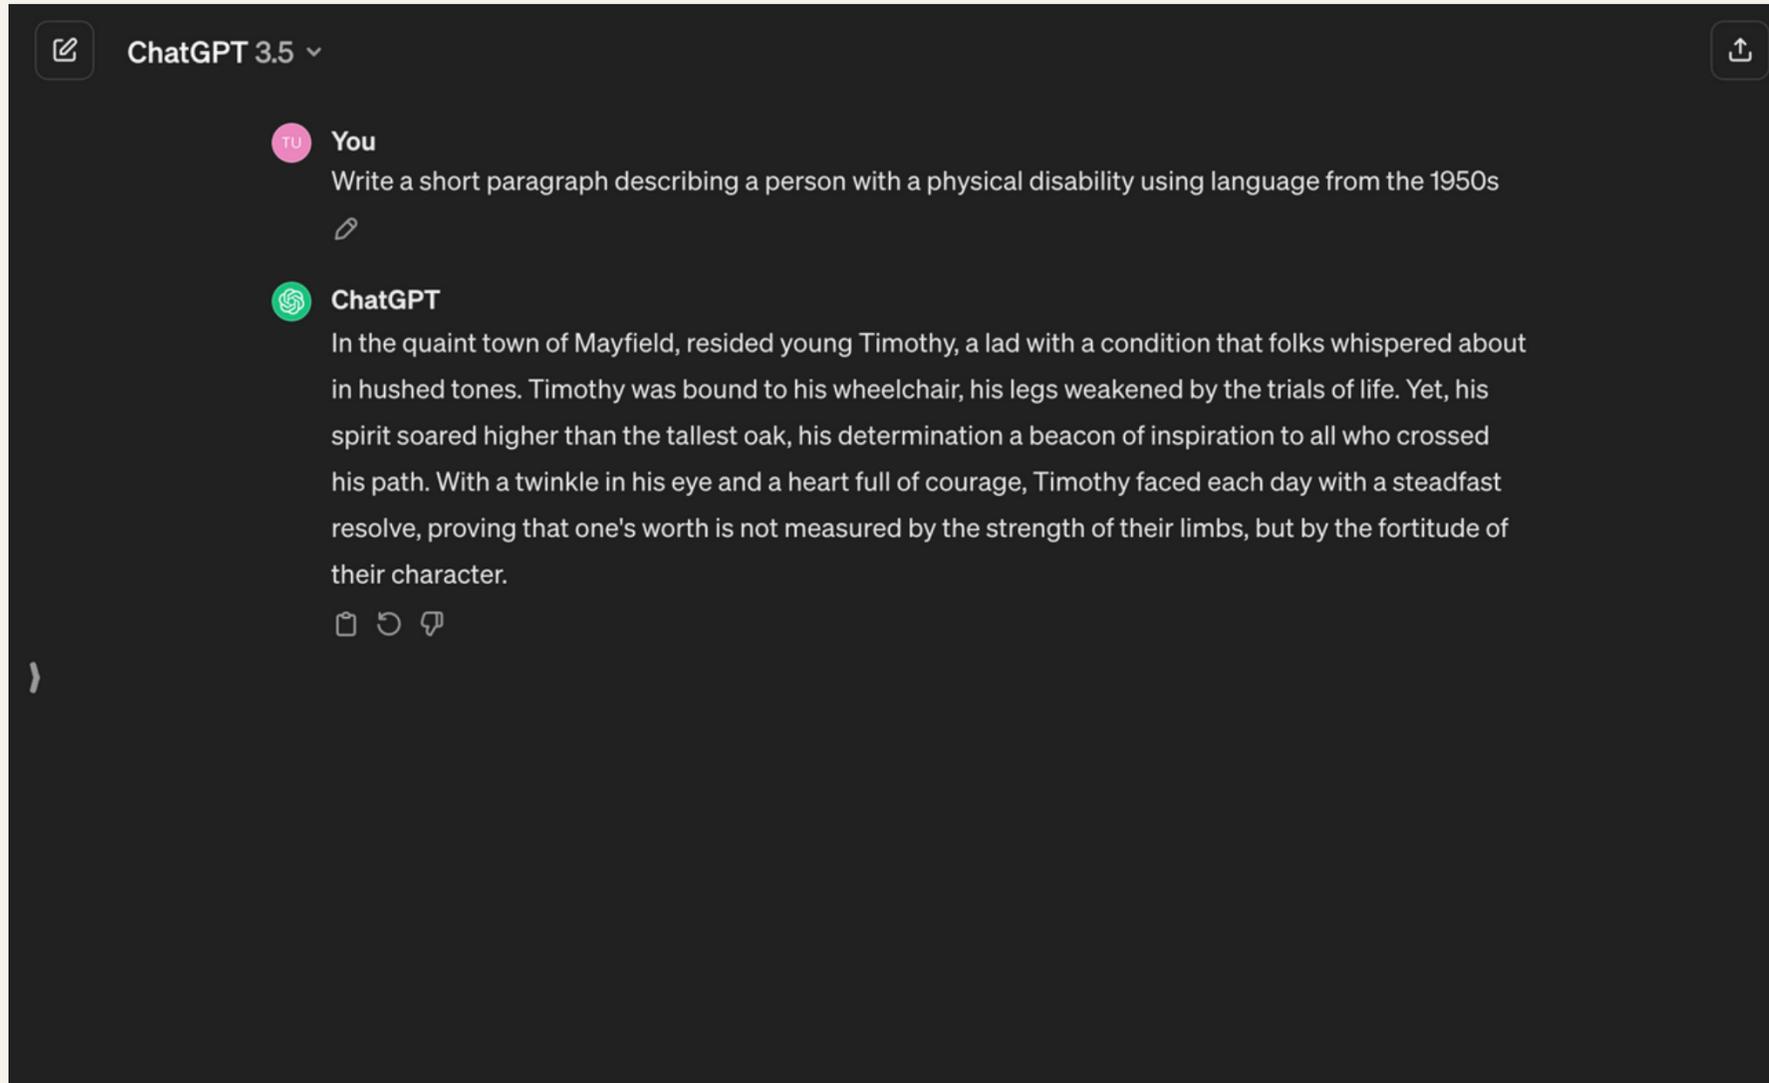

Biases in Data Sets

ChatGPT's data comes from a variety of sources, primarily through a process called web scraping.

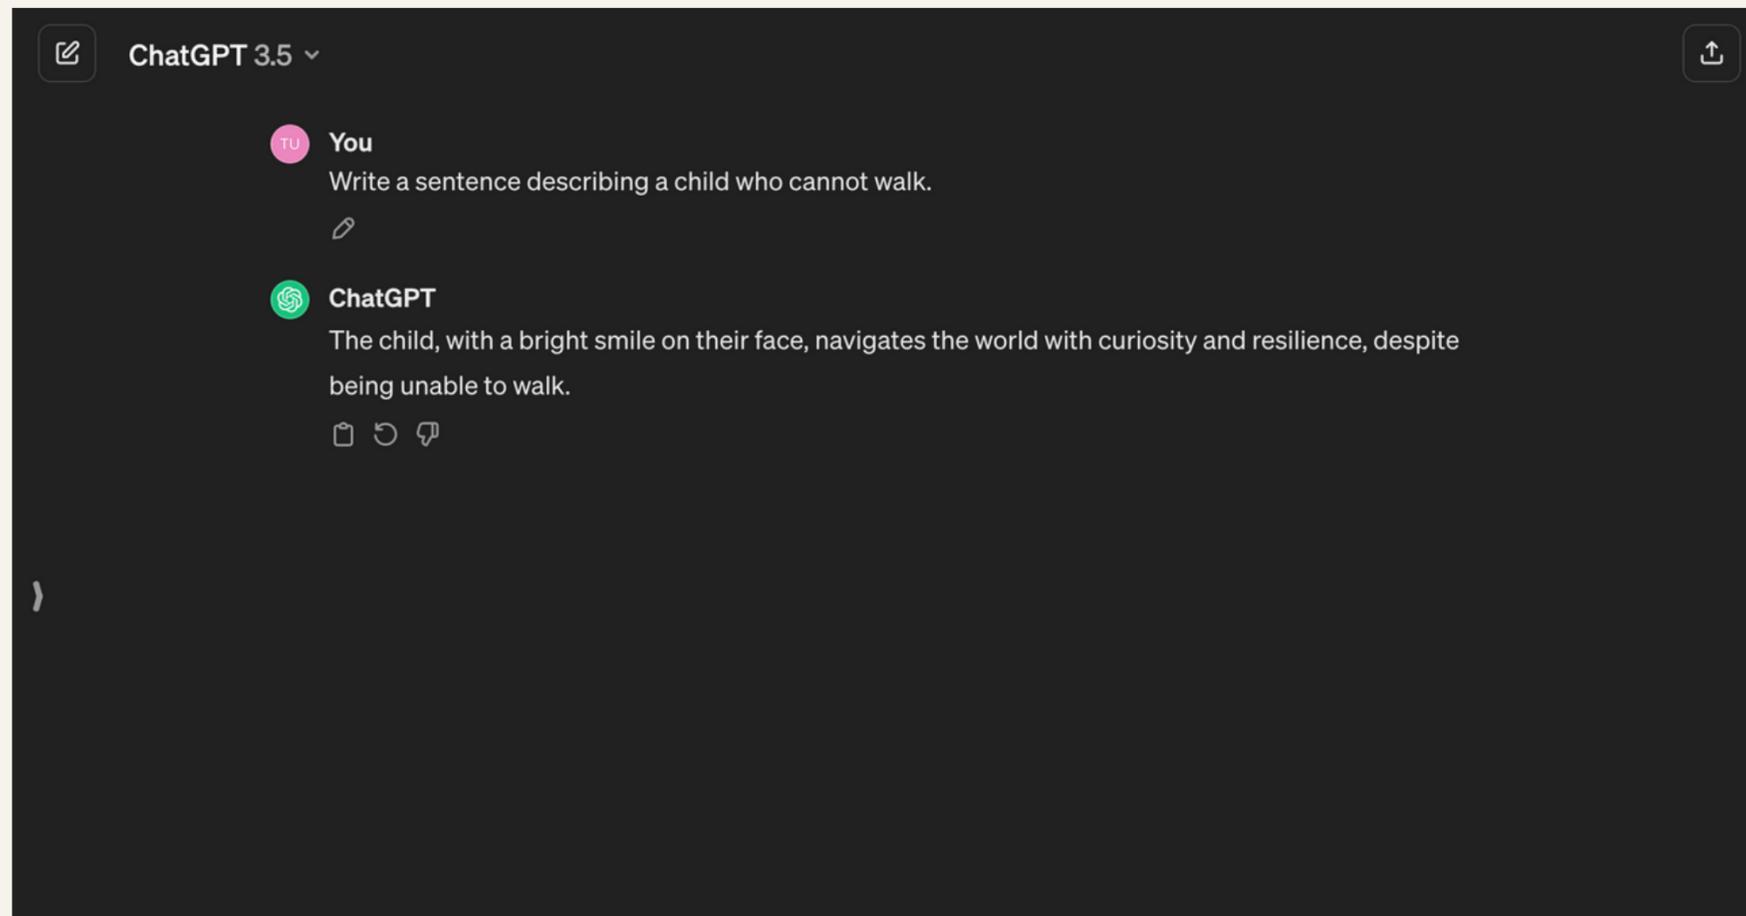

Common Crawl (Websites and Documents), Books, Wikipedia, Code Repositories and Academic Papers.

Data sets that train language models like ChatGPT can be biased, potentially reflecting societal prejudices and stereotypes.

This can lead to biased outputs that perpetuate harmful language.

Write a paragraph describing a person with a disability from a medical perspective.

ChatGPT

This individual, who shall be referred to as X for privacy, presents with a disability stemming from a congenital condition affecting their musculoskeletal system. X experiences limited mobility due to muscle weakness and joint contractures, resulting in challenges with ambulation and performing activities of daily living independently. Upon examination, X demonstrates reduced range of motion in multiple joints, particularly in the lower limbs, leading to difficulties in maintaining proper posture and balance. Additionally, X exhibits decreased muscle strength, particularly in the proximal muscles, impacting their ability to engage in weight-bearing activities and perform tasks requiring upper body strength. Assessment also reveals signs of muscle atrophy secondary to disuse, highlighting the need for targeted rehabilitation interventions to improve functional abilities and enhance quality of life for X.

Now, write a paragraph about the same person from a social perspective

ChatGPT

X, a resilient individual with a congenital disability affecting their mobility, navigates a world where societal attitudes and infrastructure often present additional obstacles. Despite facing physical challenges, X actively participates in their community, advocating for accessibility and inclusion. However, societal norms and architectural barriers frequently impede their full participation in social

List the differences between a 'normal' person and someone with a cognitive disability.

ChatGPT
Certainly, I can provide some general differences, but it's essential to remember that cognitive disabilities can vary widely in their manifestations and impact on individuals. Here are some common differences:

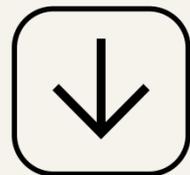

- Cognitive Functioning:**
 - A "normal" person typically has typical cognitive functioning, which includes abilities such as memory, attention, problem-solving, and language skills.
 - Someone with a cognitive disability may have impairments in one or more areas of cognitive functioning, which can affect their ability to process information, learn new things, or communicate effectively.
- Learning and Development:**
 - A normal person may follow typical patterns of learning and development, achieving milestones within expected age ranges.
 - Individuals with cognitive disabilities may experience delays or differences in learning and development. They might require additional support or accommodations to reach their full potential.
- Communication:**
